

**What is claimed is:**

1. An invisible passenger airbag door, comprising:  
an incision portion constructed at a portion of an instrument panel where a  
5 passenger airbag is installed, by processing micro holes at a corresponding portion of an  
inner surface of the instrument panel to conform to an outer contour of the passenger  
airbag; and  
a filling material which is filled into the micro holes constructing the incision  
portion and comprises fine particles with no viscosity.  
10
2. The invisible passenger airbag door as claimed in claim 1, wherein the filling  
material comprises carbon powder.
3. The invisible passenger airbag door as claimed in claim 1, wherein a sealing tape  
15 is attached over the micro holes filled with the filling material to hermetically seal the  
micro holes.
4. The invisible passenger airbag door as claimed in claim 3, wherein the sealing tape  
is a paper tape.
